

Before you start, remove the MiniDrone's battery.

1. Pull on the damaged propellers to remove them.

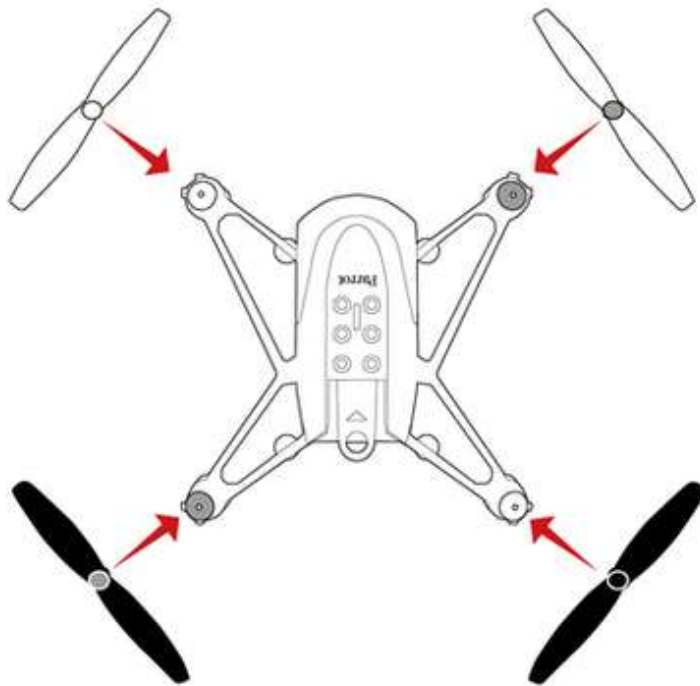

2. Install the new propellers on their corresponding motors.

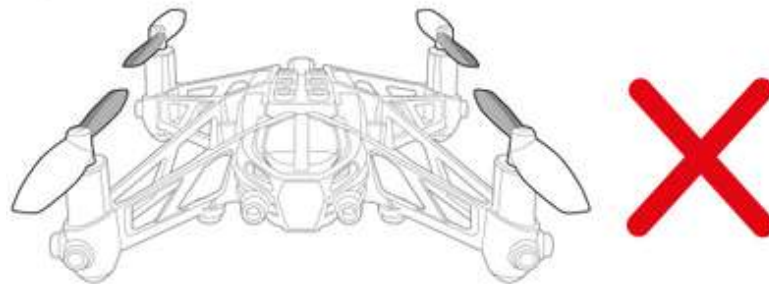

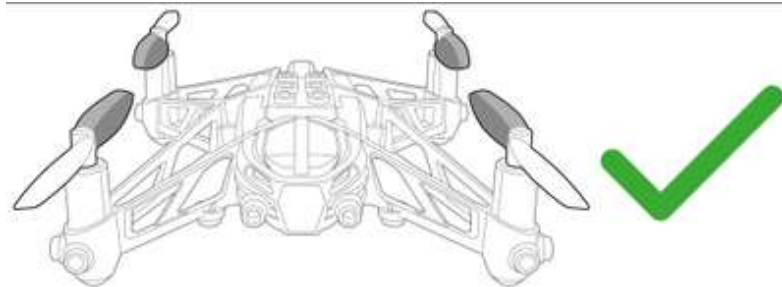

Follow these instructions to properly install propellers:

- Put white propellers on the front and black propellers on the back of the MiniDrone.
- Match the propellers with grey dots to the motors with grey stickers (see diagram below).

FRONT

- Make sure the propellers are properly installed: when positioning them parallel to each other, the inside blade must tilt toward the MiniDrone (see diagram below).

Warning: if your MiniDrone flips during take off, then your propellers are not properly installed.
